

LoginWidget::loginRequested

LoginWidget::registerRequested

LoginWidget::username

```
graph LR; A[LoginWidget::loginRequested] --> C[LoginWidget::username]; B[LoginWidget::registerRequested] --> C;
```

The diagram illustrates a Qt-style signal-slot or signal-property connection. On the left, two white rectangular boxes with black borders represent signals: 'LoginWidget::loginRequested' (top) and 'LoginWidget::registerRequested' (bottom). On the right, a gray rectangular box with a black border represents a property: 'LoginWidget::username'. Two blue arrows point from the right side of each signal box to the left side of the property box, indicating that both signals are connected to the 'username' property.
